

Diesel Stations

Imenco's Diesel Stations are designed and manufactured as a standard product, which can easily be adapted / modified to meet any special requirements of the individual Client.

Imenco Diesel Stations are designed and manufactured as a standard product, which can easily be adapted / modified to meet any special requirements of the individual Client.

The standard Diesel Stations are equipped with an internal pump and have the option of an external pump where required. The diesel hose is mounted onto a manual hose reel and is equipped with a re-settable flow meter.

The Diesel Stations is mounted onto a compact skid with a suitable drip pan in stainless steel and enclosed in an aluminum case for protection of the equipment. This design also takes into consideration the protection of the hose from wear and tear.

An EX approved control panel enclosed in stainless steel which can be connected to remote systems for a start and stop control.

For stations operating in sub-zero climates Celsius, an EX rated heater is installed in the cabinet with heat tracing on tubing.

The complete stations are built in SS316L, with Offshore Aluminum supplied enclosures.

Piping is manufactured as standard in stainless steel equivalent to NORSOK AS300 specification.
